

## Overview

KEMET's VM series of dual function protective devices protect against voltage surges in an automotive voltage region and against radio frequency noise. This component replaces two components – a low voltage varistor and a capacitor.

KEMET's VM series incorporate a varistor function in automotive applications in a voltage region of 12 V, 24 V and 42 V and a function of a radio-frequency filtering capacitor in a high capacitance range from 0.47 to 1.5 µF, making them ideal for protection in automobile electronic applications.

KEMET's VM series are square shaped components with in-line leads and require at least 30% less mounting space.

## Applications

Typical applications include the protection against voltage transients and suppression of radio-frequency interference in automobile electronics including wiper motors, central locking systems, seat adjustment motors, seat heating and electric window systems.

## Benefits

- Through-hole form factor
- Operating ambient temperature of -40°C to +125°C
- Supply voltage of 12 V, 24 V and 42 V
- Operating voltage of 16 to 56 VDC
- Capacitance range at 1 kHz of 0.47 to 1.5 µF
- X7R capacitor temperature characteristics
- Dimensional and weight savings on the board
- RoHS 2 2011/65/EC, REACH compliant
- AEC-Q200 qualified Grade 1

RoHS 2 2011/65/EC, REACH

## Performance Characteristics

Continuous	Units	Value
Steady State Applied Voltage		
DC Voltage Range ( $V_{dc}$ )	V	16 to 56
AC Voltage Range ( $V_{rms}$ )	V	14 to 40
Transient		
Load Dump Energy, (WLD)	J	6 to 12
Non-Repetitive Surge Current, 8/20 $\mu$ s Waveform ( $I_{max}$ )	A	800 to 1,200
Non-Repetitive Surge Energy, 10/1000 $\mu$ s Waveform ( $W_{max}$ )	J	2.4 to 10.5
Capacitance Range	$\mu$ F	0.47 to 1.5
Capacitor Temperature Characteristics		X7R
Operating Ambient Temperature	°C	-40 to +125
Storage Temperature Range	°C	-40 to +150
Threshold Voltage Temperature Coefficient	%/°C	< + 0.05
Insulation Resistance	GΩ	> 1
Isolation Voltage Capability	kV	> 1.25
Response Time	ns	< 25
Climatic Category		40/125/56

## Qualifications

Reliability Parameter	Test	Tested According to	Condition to be Satisfied after Testing
Voltage Proof	$V_t$	EN 132 400, Test 4.2.1. - the voltage shall be raised from near zero to the test voltage $V_t$ at a rate not exceeding 150 V/s, Where for: Class X1 Capacitors $V_t = 2*V_{rms} + 1,500$ V~, 1 minute Class Y1 Capacitors $V_t = 4000$ V~, 1 minute Class Y2 Capacitors $V_t = 2*V_{rms} + 1,500$ V~, 1 minute	no permanent breakdown of flash-overs during the test period
Impulse Voltage		EN 132 400, Test 4.13. - 24 impulses of the same polarity shall be applied to the capacitor. The time between impulses shall be no less than 10s, where for: Class X1 Capacitors $V_p = 4$ kV Class Y1 Capacitors $V_p = 8$ kV Class Y2 Capacitors $V_p = 5$ kV	no self-healing breakdowns or flash-overs

## Qualifications cont'd

Reliability Parameter	Test	Tested According to	Condition to be Satisfied after Testing
AC/DC Bias Reliability	AC/DC Life Test	EN 132 400, Test 4.14, 1000 h at UCT, where: – for X Class Capacitors: at V = 1.25 Vrms and once per hour the voltage shall be increased to 1000 V~ for 0.1 s – for Y Class Capacitors: at V = 1.7 Vrms and once per hour the voltage shall be increased to 1,000 V~ for 0.1 s	no visible damage $ \Delta C/C  < 20\%$ $\tan \delta < 0.008$ IR greater than 50 % of the applicable limits no permanent breakdown or flash-over during voltage proof
Charge and Discharge		EN 132 400, Test 4.15. – 10.000 cycles of charge and discharge at the rate of one operation per minute with the test voltage of $\text{SQRT}(2) * \text{Vrms}$ discharge rate adjusted to 100 V/ $\mu$ s	$ \Delta C/C  < 10\%$ $\tan \delta < 0.008$ IR greater than 50 % of the applicable limits
Radio – Frequency Characteristics		EN 132 400, Test 4.16. – measurement of capacitor impedance over a range of frequencies	with specification
Capacitance – Temperature Characteristics		Measurement of capacitance and tan 6 in the temperature chamber at 20 °C and at UCT and LTC	with specification
Environmental and Storage Reliability	Climatic Sequence	EN 132 400, Test 4.11 a) Dry heat, 16 h, UCT, Test Ba, IEC 68-2-2 b) Damp heat, cyclic, the first cycle: 55°C, 93 % RH, 24 H, test DB, IEC 68-2-1 c) Cold, LCT, 2 h, Test Aa, IEC 68-2-1 d) Damp heat cyclic, remaining 5 cycles: 55°C, 93 % RH, 24 h/cycle, Test Bd, IEC 68-2-30	no visible damage $ \Delta C/C  < 20\%$ $\tan \delta < 0.008$ IR greater than 50 % of the applicable limits no permanent breakdown or flash-over during voltage proof
	Thermal Shock	EN 132 400, Test 4.6, Test Na, IEC 68-2-14, 5 cycles UCT/LCT, 30 minutes	no visible damage
	Steady State Damp Heat	EN 132 400, Test 4.6, Test Na, IEC 68-2-14, 5 cycles UCT/LCT, 30 minutes	no visible damage $ \Delta C/C  < 20\%$ $\tan \delta < 0.008$ IR greater than 50 % of the applicable limits no permanent breakdown or flash-over during voltage proof
	Storage Test	IEC 68-2-2, Test Ba 1,000 h at maximum storage temperature	no visible damage $ \Delta C/C  < 20\%$ $\tan \delta < 0.008$ IR greater than 50 % of the applicable limits no permanent breakdown or flash-over during voltage proof
Mechanical Reliability	Solderability	EN 132 400, Test 4.5., Test Ta, IEC 68-2-20, solder bath and reflow method	Solderable at shipment and after 2 years of storage - limits
	Resistance to Soldering Heat	EN 132 400, Test 4.4., Test Tb, IEC 68-2-20, solder bath and reflow method	no visible damage $ \Delta C/C  < 10\%$
	Robustness of Termination	EN 132 400, Test 4.3., Test Ua, IEC 68-2-21	no visible damage
	Vibration	EN 131 400, Test 4.7., Test Fc, IEC 68-2-6, Frequency range 10 to 55 Hz; Amplitude 0.75 mm or 98 m/s <sup>2</sup> Total duration 6 h (3 x 2 h); Waveshape – half sine	no visible damage
	Mechanical Shock	EN 132 400, Test 4.9, Test Ea, IEC 68-2-27 Acceleration = 490 m/s <sup>2</sup> ; 100 g 6ms and 50 g 11 ms Waveshape – half sine; Number of shocks = 3 x 6	" $ \Delta C/C  < 10\%$ $\tan \delta$ within specification no visible damage"

## Application Circuit

Provides for the elimination of transients and EMI noise in automotive electronics such as engine control, exhaust gas control, safety systems, etc. against disturbances caused by small motors used in automobiles. Most frequently, small motors in an automobile are those used for windscreens wipers, window mechanisms, seat adjustments and automatic door locking.

## Soldering

Very often before soldering through-hole components, their leads get bent. It is important not to damage the component during lead bending. Typical damage incurred during bending is cracks in epoxy parts, which can lead to increased humidity sensitivity of a component and consequentially to a shorter life time.

In order to avoid epoxy parts damage it is necessary to:

- fix the most sensitive point (epoxy parts) of a component body
- bend the wire at least 2 mm below the end of epoxy parts

Other potential damage to a component which can lead to component failure or a shorter life time is thermal shock during manual soldering with a soldering iron. This can occur in the case when a soldering iron is placed too close to one point of the component body and most often it happens if the solder joint is too close to the varistor body.

**Resistance to Soldering Heat** – In the case of automatic wave soldering, it is important to provide sufficient resistance to soldering heat. In order to prevent any potential problems the standard for testing the resistance to soldering heat of through-hole components is 300°C, 10s.

**Pb-free Wave Soldering Profile Recommendations** – Recommended soldering profiles for all above components are in accordance with JEDEC standard curves (J-STD-020D) and therefore compatible with the new Pb-free process.

## Soldering (cont'd)

### Lead-free Wave Soldering Profile

Parameters	Symbol	Specification
Preheating temperature gradient		4°C/s maximum
Preheating time	$t_1$	2 to 5 minutes
Minimum preheating temperature	$T_1$	130°C
Maximum preheating temperature	$T_2$	180°C
Melting temperature/point	$T_{melt}$	217°C
Time in wave soldering phase ( $w1+w2$ )	$t_{w1+w2}$	10 seconds
Maximum wave temperature ( $w1+w2$ )	$T_3$	265°C +0/-5°C
Cooling temperature gradient		6°C/seconds maximum
Temperature jump form $T_2$ to $T_3$ ( $w1$ )	$T_3(w1) - T_3(w1) - T_2$	120°C maximum
Time from 25°C to $T_3$ (wave temperature)		8 minutes maximum

## Packaging

B	R
1,000	1,000

## Construction

## Capacitor Marking

## Taping & Reel Specifications

Symbol	Parameter	Dimension (mm)
W	Carrier tape width	18+1.0/-0.5
$W_0$	Hold down tape width	5 minimum
$W_1$	Sprocket hole position	9+0.75/-0.5
$W_2$	Distance between the upper edges of the carrier tape and hold-down tape	3 maximum
T	Total tape thickness	1.5 maximum
t	Tape thickness	0.9 maximum
P	Pitch of component	12.7±1.0
$P_0$	Feed hole pitch	12.7±0.3
$P_1$	Feed hole center to pitch	3.85±0.7
R	Lead Spacing	5+0.5/-0.2
$\Delta P$	Component alignment	±1.3 maximum
$\Delta h$	Component alignment	±2 maximum
d	Wire diameter	0.6 maximum
$D_0$	Feed hole diameter	4±0.2
H	Height from tape center to comp. base	18+2.0/-0.0
$H_0$	Seating plane height	16±0.5
$H_1$	Component height	32.2 maximum
L	Protrusion – cut out	11 maximum
$L_1$	Protrusion – cut off	0.5 maximum

Note: Table for R = 5 mm only. Dimensions for R = 12 mm available on request

## Terms and Definitions

Term	Symbol	Definition
Rated AC Voltage	$V_{rms}$	Maximum continuous sinusoidal AC voltage (<5% total harmonic distortion) which may be applied to the component under continuous operation conditions at 25°C
Rated DC Voltage	$V_{dc}$	Maximum continuous DC voltage (<5% ripple) which may be applied to the component under continuous operating conditions at 25°C
Supply Voltage	$V$	The voltage by which the system is designated and to which certain operating characteristics of the system are referred; $V_{rms} = 1,1 \times V$
Leakage Current	$I_{dc}$	The current passing through the varistor at $V_{dc}$ and at 25°C or at any other specified temperature
Varistor Voltage	$V_n$	Voltage across the varistor measured at a given reference current $I_n$ Reference current = 1 mA DC
Clamping Voltage Protection Level	$V_c$	The peak voltage developed across the varistor under standard atmospheric conditions, when passing an 8/20 $\mu s$ class current pulse
Class Current	$I_c$	A peak value of current which is 1/10 of the maximum peak current for 100 pulses at two per minute for the 8/20 $\mu s$ pulse
Voltage Clamping Ratio	$V_c/V_{app}$	A figure of merit measure of the varistor clamping effectiveness as defined by the symbols $V_c/V_{app}$ , where ( $V_{app} = V_{rms}$ or $V_{dc}$ )
Jump Start Transient	$V_{jump}$	The jump start transient resulting from the temporary application of an overvoltage in excess of the rated battery voltage. The circuit power supply may be subjected to a temporary overvoltage condition due to the voltage regulation failing or it may be deliberately generated when it becomes necessary to boost start the car
Rated Single Pulse Transient Energy	$W_{max}$	Energy which may be dissipated for a single 10/1000 $\mu s$ pulse of a maximum rated current, with rated AC voltage or rated DC voltage also applied, without causing device failure
Load Dump Transient	WLD	Load Dump is a transient which occurs in an automotive environment. It is an exponentially decaying positive voltage which occurs in the event of a battery disconnect while the alternator is still generating charging current with other loads remaining on the alternator circuit at the time of battery disconnect
Rated Peak Single Pulse Transient Current	$I_{max}$	Maximum peak current which may be applied for a single 8/20 $\mu s$ pulse, with, rated line voltage also applies, without causing device failure
Rated Transient Average Power Dissipation	P	Maximum average power which may be dissipated due to a group of pulses occurring within a specified isolated time period, without causing device failure at 25°C
Capacitance	C	Capacitance between two terminals of the varistor measured at 1 kHz
Response Time	tr	The time lag between application of a surge and varistor's "turn-on" conduction action
Varistor Voltage Temperature Coefficient	TC	$(V_n \text{ at } 85^\circ\text{C} - V_n \text{ at } 25^\circ\text{C}) / (V_n \text{ at } 25^\circ\text{C}) \times 60^\circ\text{C} \times 100$
Insulation Resistance	IR	Minimum resistance between shorted terminals and varistor surface
Isolation Voltage		The maximum peak voltage which may be applied under continuous operating conditions between the varistor terminations and any conducting mounting surface
Operating Temperature		The range of ambient temperature for which the varistor is designed to operate continuously as defined by the temperature limits of its climatic category
Climatic Category	LCT/UCT/DHD	UCT = Upper Category Temperature – the maximum ambient temperature for which a varistor has been designed to operate continuously, LCT = Lower Category Temperature – the minimum ambient temperature at which a varistor has been designed to operate continuously DHD = Dump Heat Test Duration
Storage Temperature		Storage temperature range without voltage applied

### Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed.

All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
